## POST AIRCRAFT ACQUISITION – SUPPLEMENTAL SERVICES

---

### INTERNATIONAL DELIVERY

Now that you have acquired your new aircraft, it's time to have it delivered to your location.

After any required maintenance and upgrades have been performed, we will look into the best method for delivery based on your type of aircraft as well as location. Just one example to consider for international delivery would include disassembly and placement in a cargo container for smaller aircraft, where larger aircraft would be modified with long range fuel tanks and flown by a professional ferry company.

Many other aspects of international delivery include knowledge of en route as well as destination legalities, customs, fees, permits, clearances, insurance, registration and repainting of new identification markings of the aircraft itself.

Remember to leverage the experience of a career professional to avoid any mistakes or oversight regarding the many details associated with the logistics of international access and delivery.

### RESTORATION SERVICES

As a new owner of a pre-owned aircraft, you may choose to personalize or otherwise bring it up to date. Some options to consider include personalized interior and exterior upgrades and a custom paint scheme, as well as introduction of newer technology avionics, entertainment and personal communications systems.

As your personal resource and representative you will receive experienced industry-wide, non-biased advice and direction looking out for only your best interests as we review the many available options applicable for your new aircraft – minimizing less than desirable solutions while avoiding being taken advantage of in the process.
